

NNA's Neuro-Rehab Facilities

NNA's neuro-rehab complex, conveniently located in its downtown Akron Neuroscience Center, offers a 6,000-square-foot gym with the latest therapy equipment, six private treatment rooms and a warm-water therapy pool.

Virtually all of the rehabilitative services a patient needs are within a few hundred feet of their neurologist's office.

Specialized Neurological Rehabilitation at NNA

NNA's dedicated neuro-rehab program: a multi-disciplinary team approach

NNA's dedicated neuro-rehab program: a multi-disciplinary team approach

Neurology and Neuroscience Associates' (NNA) dedicated neuro-rehab program is a multidisciplinary team approach to rehabilitation, working together for the benefit of patients, consisting of physical therapy, occupational therapy, speech therapy, aquatic therapy, neurologists, neuropsychologists and nurse practitioners.

Our goal is to return patients to the highest possible level of function and independence at home, at work and in the community.

Patients receive comprehensive treatment from therapists who are experts in neuro-rehabilitation of specific disorders. The whole person—physical and psychosocial—is taken into account.

NNA therapists help patients with various neurological disorders

- Amyotrophic Lateral Sclerosis (ALS)
- Balance disorders
- Carpal tunnel syndrome
- Cognitive disorders
- Communication disorders
- Gait disorders
- Multiple Sclerosis (MS)
- Neuropathies
- Parkinson's disease
- Spinal disorders
- Stroke
- Swallowing disorders
- Traumatic brain injury

Alleviate specific physical deficits

Following an evaluation, NNA's neuro-rehab staff establishes appropriate plans of care and adaptive equipment to alleviate specific physical deficits and maximize the patient's ability to perform daily activities.

Each patient's therapy program is custom designed by a

licensed, experienced NNA therapist with specialized expertise in neuro-rehabilitation. Patients perform their individualized program with guidance from NNA's trained, caring team of therapists.

Fast answers to important questions

Referring physicians receive initial and subsequent progress reports in a timely fashion.

Should questions arise during a therapy session, an integrated e-mail system allows therapists immediate contact with physicians—one of the benefits of having multiple services under one roof.

Patients' medical information also is readily available to therapists through NNA's electronic medical records system.

Occupational & physical therapy

NNA's occupational and physical therapists utilize the latest techniques and equipment to help achieve maximal functional outcomes. From therapeutic exercise, stretching and

strengthening to walking, wheelchair proficiency, balance training and much more, patients receive comprehensive treatment focused on the specific disorder.

Since the patient receives neurological care and therapy in one place, the physician can more carefully individualize the services, more closely follow the patient, and order treatment when warranted.

Aquatic therapy

Aquatic therapy is a rehabilitative exercise program using the physical properties of water to assist in patient healing and enhance functional performance. Potential aquatic therapy candidates include patients diagnosed

with multiple sclerosis, Parkinson's disease, stroke, low-back pain and fibromyalgia.

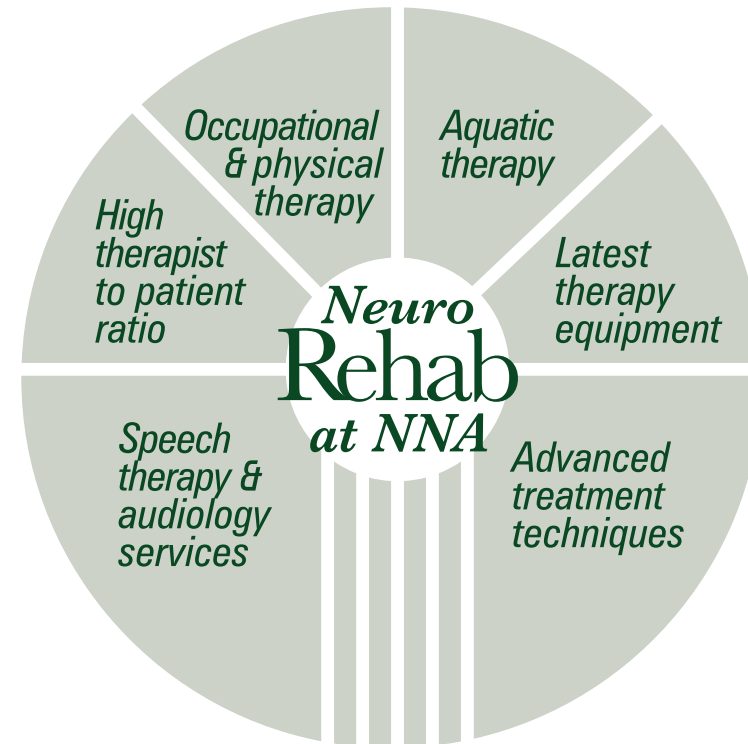

Patients with all levels of disability have easy access to NNA's 4,000-gallon warm-water aqua-therapy pool via hydraulic lift or stairs with handrail. Aquatic therapy can make a significant difference in their quality of life at home, at work and in the community.

Speech therapy and audiology services

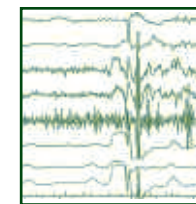

Speech-language pathology services are available for the diagnosis and treatment of communication, cognitive, and swallowing disorders associated with a wide range of neurological disorders.

These services have been established onsite in partnership with The University of Akron's School of Speech-Language Pathology and Audiology, giving patients access to cutting-edge speech therapy technology and techniques.

Specialty treatments include deep pharyngeal neuromuscular stimulation (DPNS); electrical stimulation for facial weakness, palsies; Lee Silverman voice therapy; Wilson Reading Program; assessment for and programming of augmentative communication/speech generating devices.
